CAR SELLER - REQUIREMENTS

REQUIREMENTS...

1. The system should provide functionality to manage the inventory of vehicles, including adding new vehicles, updating vehicle information (such as model, year, mileage, price, etc.), and removing sold vehicles from the inventory.
2. The system should display a comprehensive list of available vehicles for customers to browse. Each listing should include detailed information about the vehicle, including specifications, features, photos, and pricing.
3. The system should provide advanced search and filtering options to allow customers to easily find vehicles based on criteria such as make, model, year, price range, mileage, etc.
4. The system should enable customers to purchase vehicles directly through the e-commerce site.
5. Customers are allowed to schedule test drives for vehicles they are interested in.
6. The system should provide managers with access to sales analytics and reporting tools to track key metrics such as total sales, top-selling vehicles, revenue trends, etc. Allow for customization of reports and visualization of data.
7. The system should be able to inform the supplier for the different requests of the customers.
